Turn open-source documentation into Claude-ready Skills in minutes, just your terminal and a GitHub repo.

After publishing my last piece about [building a Claude Skill from scratch](#), let's take things forward and generate a Skill automatically from existing documentation. Turn an entire framework's docs into a working Claude Skill. A new open-source project, will change how you think about automating skill creation.

Hi. Jannis here.

Learn how to transform any framework's documentation like React, Vue, Django and more into a Claude Skill using the open-source Skill Seekers project. This hands-on walkthrough shows the complete manual upload workflow, no API key required (Just a regular Claude subscription).

Why I Needed a Faster Way

My first manually coded Skill worked, but it took time: collecting examples, structuring YAML, writing descriptions. For small utilities that's fine, but when you want to support frameworks like React or Django, you're not going to copy paragraphs by hand. I wanted something that could handle that bulk automatically and still give me a clean upload.

That's what made Skill Seekers interesting. It treats documentation like a dataset: crawl, clean, convert. You...
